Care Quality Commission

Inspection Evidence Table

Hillingdon Health Centre (1-7014105526)

Inspection date: 13 February 2020

Date of data download: 02 February 2020

Overall rating: Good

Safe   Rating: Good

At the previous inspection on 28 February 2019 we rated the practice as requires improvement for providing safe services because processes in place to monitor the health of patients prescribed with high-risk medicines were not always followed and arrangements to manage prescription stationery did not include a protocol to track blank prescriptions. At this inspection we found the provider had taken action to rectify these shortfalls.

Safety systems and processes

The practice had clear systems, practices and processes to keep people safe and safeguarded from abuse.

Safeguarding	Y/N/Partial
There was a lead member of staff for safeguarding processes and procedures.	Yes
Safeguarding systems, processes and practices were developed, implemented and communicated to staff.	Yes
There were policies covering adult and child safeguarding which were accessible to all staff.	Yes
Policies and procedures were monitored, reviewed and updated.	Yes
Partners and staff were trained to appropriate levels for their role.	Yes
There was active and appropriate engagement in local safeguarding processes.	Yes
The Out of Hours service was informed of relevant safeguarding information.	Yes
There were systems to identify vulnerable patients on record.	Yes
Disclosure and Barring Service (DBS) checks were undertaken where required.	Yes
Staff who acted as chaperones were trained for their role.	Yes
There were regular discussions between the practice and other health and social care professionals such as health visitors, school nurses, community midwives and social workers to support and protect adults and children at risk of significant harm.	Yes

Recruitment systems	Y/N/Partial
Recruitment checks were carried out in accordance with regulations (including for agency staff and locums).	Yes
Staff vaccination was maintained in line with current Public Health England (PHE) guidance if relevant to role.	Yes
There were systems to ensure the registration of clinical staff (including nurses and pharmacists) was checked and regularly monitored.	Yes

Safety systems and records	Y/N/Partial
There was a record of portable appliance testing or visual inspection by a competent person. Date of last inspection/test: March 2019	Yes
There was a record of equipment calibration. Date of last calibration: March 2019	Yes
There were risk assessments for any storage of hazardous substances for example, liquid nitrogen, storage of chemicals.	Yes
There was a fire procedure.	Yes
There was a record of fire extinguisher checks. Date of last check: September 2019	Yes
There was a log of fire drills. Date of last drill: July 2019	Yes
There was a record of fire alarm checks. Date of last check: September 2019	Yes
There was a record of fire training for staff.	Yes
There were fire marshals.	Yes
A fire risk assessment had been completed. Date of completion: December 2018	Yes
Actions from fire risk assessment were identified and completed.	Yes

Health and safety	Y/N/Partial
Premises/security risk assessment had been carried out.	No
Health and safety risk assessments had been carried out and appropriate actions taken. Date of last assessment: February 2019	Yes
Explanation of any answers and additional evidence: There was no formal premises/security risk assessment in place however, staff were able demonstrate robust security arrangements for the practice.	

Infection prevention and control

Appropriate standards of cleanliness and hygiene were met.

	Y/N/Partial
There was an infection risk assessment and policy.	Yes
Staff had received effective training on infection prevention and control.	Yes
Infection prevention and control audits were carried out. Date of last infection prevention and control audit: November 2019	Yes
The practice had acted on any issues identified in infection prevention and control audits.	Yes
There was a system to notify Public Health England of suspected notifiable diseases.	Yes
The arrangements for managing waste and clinical specimens kept people safe.	Yes

Risks to patients

There were adequate systems to assess, monitor and manage risks to patient safety.

	Y/N/Partial
There was an effective approach to managing staff absences and busy periods.	Yes
There was an effective induction system for temporary staff tailored to their role.	Yes
Comprehensive risk assessments were carried out for patients.	Yes
Risk management plans for patients were developed in line with national guidance.	Yes
The practice was equipped to deal with medical emergencies (including suspected sepsis) and staff were suitably trained in emergency procedures.	Yes
Clinicians knew how to identify and manage patients with severe infections including sepsis.	Yes
Receptionists were aware of actions to take if they encountered a deteriorating or acutely unwell patient and had been given guidance on identifying such patients.	Yes
There was a process in the practice for urgent clinical review of such patients.	Yes
When there were changes to services or staff the practice assessed and monitored the impact on safety.	Yes

Information to deliver safe care and treatment

Staff had the information they needed to deliver safe care and treatment.

	Y/N/Partial
Individual care records, including clinical data, were written and managed securely and in line with current guidance and relevant legislation.	Yes
There was a system for processing information relating to new patients including the summarising of new patient notes.	Yes
There were systems for sharing information with staff and other agencies to enable them to deliver safe care and treatment.	Yes
Referral letters contained specific information to allow appropriate and timely referrals.	Yes
Referrals to specialist services were documented and there was a system to monitor delays in referrals.	Yes
There was a documented approach to the management of test results and this was managed in a timely manner.	Yes
There was appropriate clinical oversight of test results, including when reviewed by non-clinical staff.	Yes
The practice demonstrated that when patients use multiple services, all the information needed for their ongoing care was shared appropriately and in line with relevant protocols.	Yes

Appropriate and safe use of medicines

The practice had systems for the appropriate and safe use of medicines, including medicines optimisation

Indicator	Practice	CCG average	England average	England comparison
Number of antibacterial prescription items prescribed per Specific Therapeutic group Age-sex Related Prescribing Unit (STAR PU) (01/10/2018 to 30/09/2019) (NHS Business Service Authority - NHSBSA)	0.98	0.82	0.87	No statistical variation
The number of prescription items for co-amoxiclav, cephalosporins and quinolones as a percentage of the total number of prescription items for selected antibacterial drugs (BNF 5.1 sub-set). (01/10/2018 to 30/09/2019) (NHSBSA)	7.6%	9.5%	8.5%	No statistical variation
Average daily quantity per item for Nitrofurantoin 50 mg tablets and capsules, Nitrofurantoin 100 mg m/r capsules, Pivmecillinam 200 mg tablets and Trimethoprim 200 mg tablets prescribed for uncomplicated urinary tract infection (01/04/2019 to 30/09/2019) (NHSBSA)	5.06	5.17	5.60	No statistical variation
Average daily quantity of oral NSAIDs prescribed per Specific Therapeutic Group Age-sex Related Prescribing Unit (STAR-PU) (01/04/2019 to 30/09/2019) (NHSBSA)	1.36	1.30	2.08	No statistical variation

Medicines management	Y/N/Partial
The practice ensured medicines were stored safely and securely with access restricted to authorised staff.	Yes
Blank prescriptions were kept securely and their use monitored in line with national guidance.	Yes
Staff had the appropriate authorisations to administer medicines (including Patient Group Directions or Patient Specific Directions).	Yes
The practice could demonstrate the prescribing competence of non-medical prescribers, and there was regular review of their prescribing practice supported by clinical supervision or peer review.	Yes
There was a process for the safe handling of requests for repeat medicines and evidence of structured medicines reviews for patients on repeat medicines.	Yes
The practice had a process and clear audit trail for the management of information about	Yes

Medicines management	Y/N/Partial
changes to a patient's medicines including changes made by other services.	
There was a process for monitoring patients' health in relation to the use of medicines including high risk medicines (for example, warfarin, methotrexate and lithium) with appropriate monitoring and clinical review prior to prescribing.	Yes
The practice monitored the prescribing of controlled drugs. (For example, investigation of unusual prescribing, quantities, dose, formulations and strength).	Yes
There were arrangements for raising concerns around controlled drugs with the NHS England Area Team Controlled Drugs Accountable Officer.	Yes
The practice had taken steps to ensure appropriate antimicrobial use to optimise patient outcomes and reduce the risk of adverse events and antimicrobial resistance.	Yes
The practice held appropriate emergency medicines, risk assessments were in place to determine the range of medicines held, and a system was in place to monitor stock levels and expiry dates.	Yes
There was medical oxygen and a defibrillator on site and systems to ensure these were regularly checked and fit for use.	Yes
Vaccines were appropriately stored, monitored and transported in line with PHE guidance to ensure they remained safe and effective.	Yes
Explanation of any answers and additional evidence: At the previous inspection we found that although the practice had a process in place to record details of blank prescriptions when they were received, they did not monitor their distribution within the practice. This meant the practice might not know whether prescriptions were missing or be in a position to trace them if this happened. At this inspection we found the practice had taken action by implementing a system to track blank prescriptions. At the previous inspection we found although the practice had a process in place to monitor the health of patients prescribed with high-risk medicines, this process was not always followed. For instance, patients prescribed lithium had received their blood tests outside the recommended timescale of three months. At this inspection we checked all patients prescribed high-risk medicines and found they had received their blood tests within the recommended timescales.	

Track record on safety and lessons learned and improvements made

The practice learned and made improvements when things went wrong.

Significant events	Y/N/Partial
The practice monitored and reviewed safety using information from a variety of sources.	Yes
Staff knew how to identify and report concerns, safety incidents and near misses.	Yes
There was a system for recording and acting on significant events.	Yes
Staff understood how to raise concerns and report incidents both internally and externally.	Yes

There was evidence of learning and dissemination of information.	Yes
Number of events recorded in last 12 months:	4
Number of events that required action: 4	4

Example(s) of significant events recorded and actions by the practice.

Event	Specific action taken
Patient was seen in a routine appointment re: an abnormal blood result sent to the practice via Docman from the diabetes team. The GP who received the workflow actioned it as 'routine appointment' although it was an abnormal result.	Urgent action was taken by the practice to ensure the patient was dealt with quickly and efficiently and learning points highlighted within the clinical team.

Safety alerts	Y/N/Partial
There was a system for recording and acting on safety alerts.	Yes
Staff understood how to deal with alerts.	Yes
Explanation of any answers and additional evidence: We saw examples of actions taken on recent alerts for example, regarding a medicine that could affect women of child bearing age.	

Well-led

Rating: Good

Leadership capacity and capability

There was compassionate, inclusive and effective leadership at all levels.

	Y/N/Partial
Leaders demonstrated that they understood the challenges to quality and sustainability.	Yes
They had identified the actions necessary to address these challenges.	Yes
Staff reported that leaders were visible and approachable.	Yes
There was a leadership development programme, including a succession plan.	Yes
Explanation of any answers and additional evidence: The provider registered with the CQC in July 2019. The lead GP had worked at the practice under the previous provider. The lead GP demonstrated a sound knowledge of the practice and the needs of the patient population. They showed a commitment to provide a high quality service.	

Vision and strategy

The practice had a clear vision and credible strategy to provide high quality sustainable care.

	Y/N/Partial
The practice had a clear vision and set of values that prioritised quality and sustainability.	Yes
There was a realistic strategy to achieve their priorities.	Yes
The vision, values and strategy were developed in collaboration with staff, patients and external partners.	Yes
Staff knew and understood the vision, values and strategy and their role in achieving them.	Yes
Progress against delivery of the strategy was monitored.	Yes
Explanation of any answers and additional evidence: The practice had a strategy to provide high quality patient centred care. Staff we spoke to were able to describe this vision and understood their role in achieving it.	

Culture

The practice had a culture which drove high quality sustainable care.

	Y/N/Partial
There were arrangements to deal with any behaviour inconsistent with the vision and values.	Yes
Staff reported that they felt able to raise concerns without fear of retribution.	Yes
There was a strong emphasis on the safety and well-being of staff.	Yes
There were systems to ensure compliance with the requirements of the duty of candour.	Yes
When people were affected by things that went wrong they were given an apology and informed of any resulting action.	Yes
The practice encouraged candour, openness and honesty.	Yes
The practice's speaking up policies were in line with the NHS Improvement Raising Concerns (Whistleblowing) Policy.	Yes
The practice had access to a Freedom to Speak Up Guardian.	Yes
Staff had undertaken equality and diversity training.	Yes

Examples of feedback from staff or other evidence about working at the practice

Source	Feedback
Staff interviews	Staff told us that the practice was a great place to work, they felt part of a team and supported to develop in their roles. They were very positive about their role.

Governance arrangements

There were clear responsibilities, roles and systems of accountability to support good governance and management.

	Y/N/Partial
There were governance structures and systems which were regularly reviewed.	Yes
Staff were clear about their roles and responsibilities.	Yes
There were appropriate governance arrangements with third parties.	Yes

Managing risks, issues and performance

There were clear and effective processes for managing risks, issues and performance.

	Y/N/Partial
There were comprehensive assurance systems which were regularly reviewed and improved.	Yes
There were processes to manage performance.	Yes
There was a systematic programme of clinical and internal audit.	Yes
There were effective arrangements for identifying, managing and mitigating risks.	Yes
A major incident plan was in place.	Yes
Staff were trained in preparation for major incidents.	Yes
When considering service developments or changes, the impact on quality and sustainability was assessed.	Yes

Appropriate and accurate information

There was a demonstrated commitment to using data and information proactively to drive and support decision making.

	Y/N/Partial
Staff used data to adjust and improve performance.	Yes
Performance information was used to hold staff and management to account.	Yes
Our inspection indicated that information was accurate, valid, reliable and timely.	Yes
There were effective arrangements for identifying, managing and mitigating risks.	Yes
Staff whose responsibilities included making statutory notifications understood what this entails.	Yes

Engagement with patients, the public, staff and external partners

The practice involved the public, staff and external partners to sustain high quality and sustainable care.

	Y/N/Partial
Patient views were acted on to improve services and culture.	Yes
The practice had an active Patient Participation Group.	No
Staff views were reflected in the planning and delivery of services.	Yes
The practice worked with stakeholders to build a shared view of challenges and of the needs of the population.	Yes
Explanation of any answers and additional evidence: The practice informed us that the patient participation group had recently become inactive because of a lack of interest from patients. However, the practice demonstrated they were making a proactive effort to attract new members. The practice told us they had made a number of improvements to the service as a result of patient feedback including an improved telephone system and improved seating in the waiting area.	

Feedback from Patient Participation Group.

Feedback
NA

Continuous improvement and innovation

There were evidence of systems and processes for learning, continuous improvement and innovation.

	Y/N/Partial
There was a strong focus on continuous learning and improvement.	Yes
Learning was shared effectively and used to make improvements.	Yes

Examples of continuous learning and improvement
The practice was involved in a collaborative scheme to detect when social isolation led to avoidable attendance at hospital. This involved identifying patients who had attended emergency departments more than twice in the previous twelve months and in collaboration with the local community care team, screening to determine whether attendance at hospital was indicative of undiagnosed mental health conditions or social isolation.

Notes: CQC GP Insight

GP Insight assesses a practice's data against all the other practices in England. We assess relative performance for the majority of indicators using a "z-score" (this tells us the number of standard deviations from the mean the data point is), giving us a statistical measurement of a practice's performance in relation to the England average. We highlight practices which significantly vary from the England average (in either a positive or negative direction). We consider that z-scores which are higher than +2 or lower than -2 are at significant levels, warranting further enquiry. Using this technique we can be 95% confident that the practices performance is genuinely different from the average. It is important to note that a number of factors can affect the Z score for a practice, for example a small denominator or the distribution of the data. This means that there will be cases where a practice's data looks quite different to the average, but still shows as no statistical variation, as we do not have enough confidence that the difference is genuine. There may also be cases where a practice's data looks similar across two indicators, but they are in different variation bands.

The percentage of practices which show variation depends on the distribution of the data for each indicator, but is typically around 10-15% of practices. The practices which are not showing significant statistical variation are labelled as no statistical variation to other practices.

N.B. Not all indicators in the evidence table are part of the GP insight set and those that aren't will not have a variation band.

The following language is used for showing variation:

Variation Bands	Z-score threshold
Significant variation (positive)	≤-3
Variation (positive)	>-3 and ≤-2
Tending towards variation (positive)	>-2 and ≤-1.5
No statistical variation	<1.5 and >-1.5
Tending towards variation (negative)	≥1.5 and <2
Variation (negative)	≥2 and <3
Significant variation (negative)	≥3

Note: for the following indicators the variation bands are different:

- Child Immunisation indicators. These are scored against the World Health Organisation target of 95% rather than the England average. Note that practices that have "Met 90% minimum" have not met the WHO target of 95%.

- The percentage of respondents to the GP patient survey who responded positively to how easy it was to get through to someone at their GP practice on the phone uses a rules based approach for scoring, due to the distribution of the data. This indicator does not have a CCG average.

- The percentage of women eligible for cervical cancer screening at a given point in time who were screened adequately within a specified period (within 3.5 years for women aged 25 to 49, and within 5.5 years for women aged 50 to 64). This indicator does not have a CCG average and is scored against the national target of 80%.

It is important to note that z-scores are not a judgement in themselves, but will prompt further enquiry, as part of our ongoing monitoring of GP practices.

Guidance and Frequently Asked Questions on GP Insight can be found on the following link:
https://www.cqc.org.uk/guidance-providers/gps/how-we-monitor-gp-practices

Note: The CQC GP Evidence Table uses the most recent validated and publicly available data. In some cases at the time of inspection this data may be relatively old. If during the inspection the practice has provided any more recent data, this can be considered by the inspector. However, it should be noted that any data provided by the practice will be unvalidated and is not directly comparable to the published data. This has been taken into account during the inspection process.

Glossary of terms used in the data.
- **COPD**: Chronic Obstructive Pulmonary Disease
- **PHE**: Public Health England
- **QOF**: Quality and Outcomes Framework
- **STAR-PU**: Specific Therapeutic Group Age-sex weightings Related Prescribing Units. These weighting allow more accurate and meaningful comparisons within a specific therapeutic group by taking into account the types of people who will be receiving that treatment.
