NASAL FLU VACCINE FOR CHILDREN

In General Practice Surgeries the criteria for the administration of the nasal flu vaccine for children is as follows:

1. Children aged 2 & 3 years on 31st August 2019
2. Those children in at risk categories for the usual flu vaccination EG: Diabetes, Asthma

If your child receives the nasal flu vaccination via the school programme due to their age, please note we DO NOT administer it here in the surgery. Parents are advised to ensure their child attends the date that is given to them via the school. We cannot issue the vaccine on a private basis here and we have to stick to the criteria laid out by NHS England for General Practice.
